## Projects

---

### Project 1:

#### Title: Personal Portfolio.

- **Overview:** This is a fully responsive portfolio website showcasing my skills, projects, and achievements in web development. It serves as a professional platform to connect with recruiters and collaborators.
- **Technologies Used:** HTML, CSS, JavaScript
- **Features:**
  - User-friendly and responsive design, optimized for all devices
  - Smooth navigation with visually appealing animations
  - Detailed sections for skills, projects, and contact information
  - Hosted live on GitHub Pages for global accessibility
- **Objective:** To highlight my expertise in front-end development and my ability to create dynamic and engaging web applications.

### Project 2:

#### Title : Retail Billing Software

- **Overview:** A comprehensive billing software designed to streamline retail operations by managing customer transactions and generating accurate invoices.
- **Technologies Used:** Python, Django, PostgreSQL, HTML, CSS, JavaScript, ReactJS
- **Features:**
  - Intuitive interface for generating bills and managing products
  - Integration with a PostgreSQL database for efficient data storage and retrieval
  - Real-time invoice generation with tax and discount calculations
  - Multi-platform compatibility with a responsive design
  - User authentication using Google and Facebook APIs
- **Objective:** To simplify billing processes for retail businesses while ensuring efficiency and scalability in a dynamic environment.
- **Status:** The backend and frontend components are fully functional, with the server up and running.
