- Music

Projects

Project 1:

Title: Retail Billing Software

Description: Created Retail billing software using Html, CSS, Java Script, Python and Django which helps the retail business to simply billing and sales management. Where merchant can easily access warehouse to maintain their stock and generates the report based on daily, weekly and monthly. So that they can improve the performance, I have generated a code where user can get the bill to their mobiles. Here we can also get the history of previous purchase.

Project 2:

Title: API Link

Description: Integrated third party API to Google and Facebook authentication Using Python, Django, OAuth, REST APIs. It helps in Access data from each Other, When two application or websites connect their APIs.

Project 3:

Title: Weather App

Description: Developed Weather Application using Python. which shows the temperature of the location by the User inputs.

Project 4:

Title: Personal Portfolio.

Description: Created My Personal Portfolio by using Html, CSS, JavaScript. Where you can find more about My Projects, Skills and Social links
